

Woods End Laboratories LLC

About Us

Since 1974, Woods End, a leader in Soil Health science, technologies, products & services, has been dedicated to the characterization and understanding of the interaction of human industry with soil environments. Dr. William Brinton, founder of Woods End, introduced Solvita, a soil health test developed to simplify respiration testing making soil respiration more cost effective for commercial soil labs ([solvita.com](https://www.solvita.com)).

Dr. Rebecca Harvey, CEO of Woods End Laboratories since the spring of 2022, says our principal focus is building a practical and natural approach to soil analysis through research and farmer outreach. We are experts in characterizing the utilization of organic wastes in agricultural systems and in mapping the fate and effects of agri-chemicals in soil and compost environments. Recently, Woods End has seen incredible growth and has expanded its offerings and facility to accommodate the growing soil Carbon Testing market. Currently, our services are used by farmers worldwide and our custom research services are used by consultants and agricultural Fortune 500 firms.

PRICE (USD)	\$85	\$50	\$125

INNOVATION BUILT FOR FARMERS SOLVITA.COM

2

Woods End is the Premier Carbon Laboratory in the Northeastern United States processing tens of thousands of soil samples for Bulk Density (BD) and Total Carbon (TC).

Testimonials/Brands

//

I'm really enjoying the Solvita Soil Health Suite kit. I think it will be a really great addition to my research program and outreach activities.

— Dr. Amanda Diochon – Professor, Department of Geology, Lakehead University, Canada

Woods End's Solvita test, is a leading soil health diagnostic product utilized across the globe to help measure the biological activity in soil.

Harvey stresses that Woods End incorporates many different physical, chemical, and biological parameters in Solvita, more than other soil health tests that are available.

These parameters indicate healthy functioning in a farm system. The usefulness of Solvita commercial soil health tests as valuable tools to predict soil health indicators such as Soil Organic Carbon (SOC) and Total Nitrogen (TN) has been confirmed by long term field research conducted by the University of Guelph and released in Soil and Tillage Research, September 2021.

Biodegradability & Compostability

Woods End is America's longest running independent compost laboratory.

Our clients in biodegradability testing:

DuPont, FritoLay, KraftFoods, Natureworks, DowAgroSciences, Novamont, Pepsico, Boise, Nordenia, Huhtamaki, Toray, US Army Environmental Center, Weetabix and many more.

Dr. Rebecca Harvey, CEO

Dr. Harvey brings with her a wealth of knowledge and experience in analytical, Atmospheric Chemistry (her PhD focus) and Carbon Science (her postdoctoral research), along with experience in Agricultural Science and Lab Administration. She has a strong background in data quality assurance including FDA, FSIS, ISO 17025, DOD, and TNI accreditation standards.

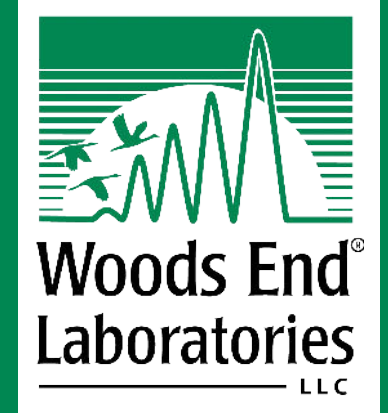

As the former Director of the Vermont Agriculture and Environmental Laboratory (Vermont State Lab), which processed dairy, animal health, maple, hemp, fertilizer, feed, water quality, and air quality samples for VT, NY and NH, Dr. Harvey is a game changer for WELs.

Behind New CEO Rebecca Harvey, Woods End Laboratories Plans to Set the Bar Even Higher for Agricultural Soil Testing
