

What Our Clients Say About Us

I'm really enjoying the Solvita Soil Health Suite kit. I think it will be a really great addition to my research program and outreach activities.

Dr. Amanda Diochon – Professor, Department of Geology, Lakehead University, Canada

One of my luckiest decisions was to get a IRTH respirometer before Covid. It's now been plugging away Soil Microbial Activity tests at a rate of one soil per 24 hours at the corner of my home office. "Slow and steady."

Tuomas Mattila - Senior Research Scientist, SYKE Finnish Environment Institute

The Solvita Soil Health Suite box has been delivered. I have spoken with other teachers about getting involved in this project, and interest is very high and it will be something special. I appreciate your help with the process to this point and I am sure we will be reaching out with questions as we have them!

Matthew Schuchman, Ed.D. - Science Research Teacher, Clarkstown High School

Yes, we have been quite popular here and also been able to open a new window to this area of advanced agronomy. Co-operation with some researchers has begun. As it is, carbon sequestration is now the thing and just yesterday we had one of these working meetings. Our main milk processor and national research have their "carbon neutral" project and we provide measurements to one of their trial farms. There we have done the full sweep, starting with Veristech scanning and taking Intact Cores (46x1000mm) and done 3 depth Soil Health Suite measurements. The actual goal is to numerice how carbon balance proceeds in different farming systems - so quite much work waiting.

At this pace, I need to order refill already.

Jussi Knaapi – Farmer, Agronomist, Freelance Journalist, Finland
